MICROBIOLOGY

BLOOD CULTURE BACTEC

ORGANISMS GROWN Blood is sterile after 5 Days of aerobic incubation by Rapid Bactec 9050.
RESULT(BAC) NEGATIVE NEGATIVE

Interpretation(s)

Reporting Schedule:

Positive culture will be reported immediately on completion of identification and sensitivity. Negative culture will be reported after 48 hours and 5 days.

Note:

Test was performed on fully automated system. This system and culture bottles provided both microbial detection and a culture media with suitable nutritional and environmental conditions for organisms, commonly encountered in blood infection and sterile body fluids. An inoculated bottle is placed in an instrument where it is incubated and continuously monitored for the presence of micro-organisms that grow in the Bact/Alert bottle.
